Main circuit card Z001

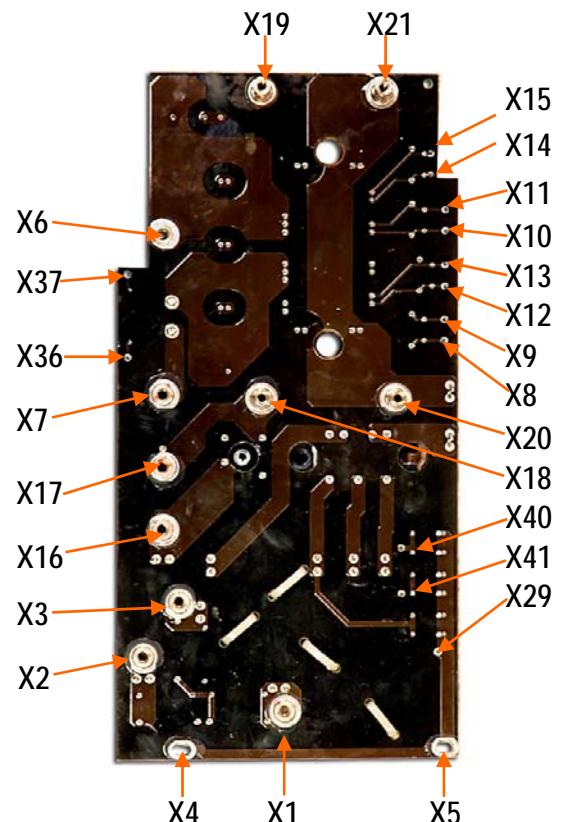

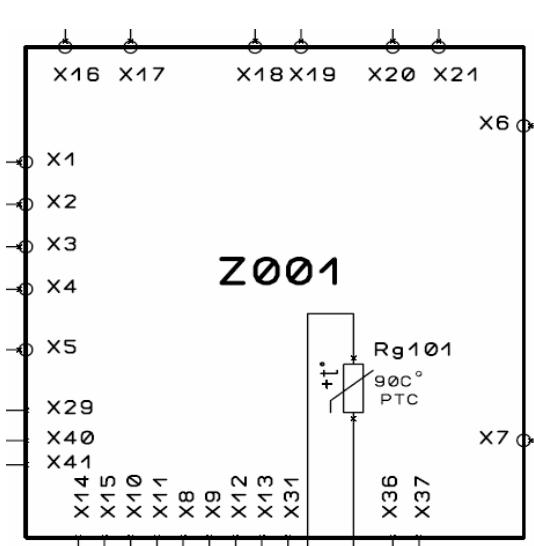

Operation principle

When IGBT-transistors G1 and G4 conduct, there is a positive voltage U_{T1} in main transformer T1 primary and when IGBT-transistors G2 and G3 conduct there is a negative voltage U_{T1} in main transformer primary. Power is adjusted by changing the IGBT timings (PWM)

Operation of the LEDs on control card

A001 / LEDS	
H1	IGBT gate pulses
H2	IGBT gate pulses
H3	IGBT gate pulses
H4	IGBT gate pulses
H5	+15V
H6	+5V
H7	Remote control unit connected
H8	Data communication
H9	Micro controller operation
H10	Micro controller operation

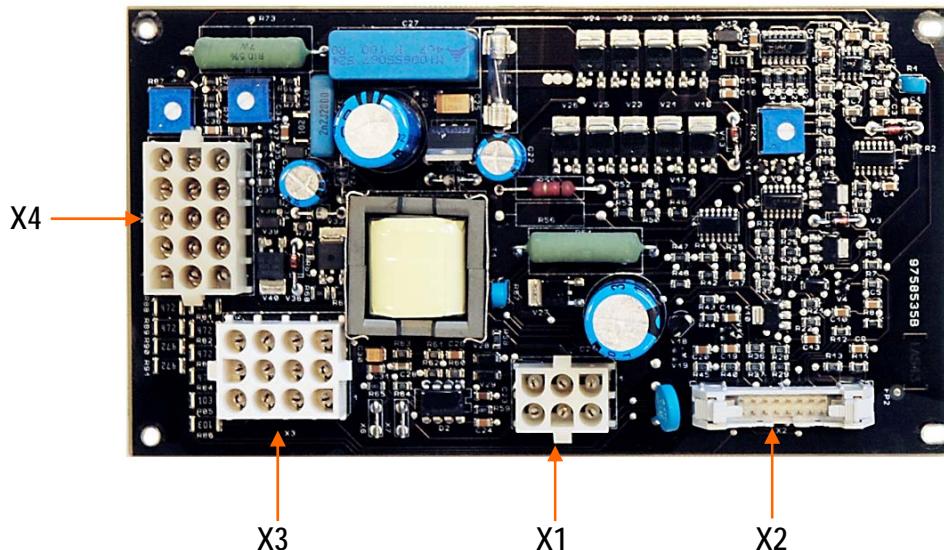

H1-H4: Indicate the existence of the gate pulses.

H5, H6: Indicate that auxiliary voltages exist (+5V and +15V). If these Leds are not lit when the power source is switched on, first thing to do is check if control card fuses are OK.

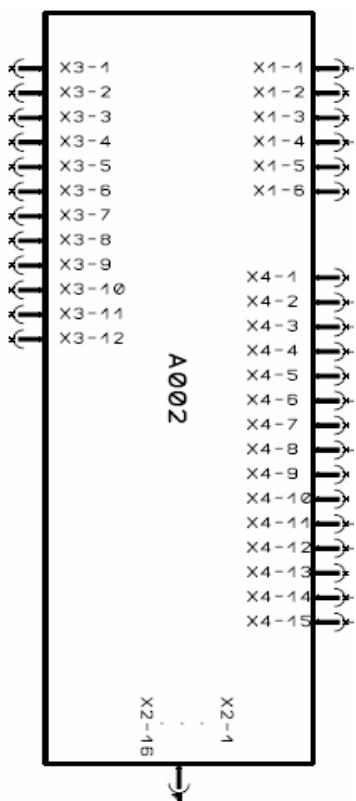

H7, H8: Indicate operation of the auxiliary device connection. LED H8 indicates that there is data communication taking place through the system bus when it is lit. LED H7 indicates that remote control unit is connected when it is lit.

H9, H10: Indicate state of the microcontroller. In normal situation both leds should be lit.

- Err 2: Power source undervoltage (new start up)
 Err 3: Power source overvoltage (new start up)
 Err 4: Power source is overheated
 Err 5: Water unit alarm
 Err 11: Two units have the same address in the system bus
 Err 12: Data error on communication (2)
 Err 13: Member of a wrong FastMIG family connected
 Err 14: Data communication problem between power source and auxiliary unit
 Err 15: Power source program / updating method problem
 Err 21: Power source´s control card +5 V aux. Voltage too low
 Err 22: Power source´s control card +15 V aux. Voltage too low
 Err 23: Temporarily power source overvoltage
 Err 31: Power source calibration error. Welding only possible with default values.
 Err 54: No data communication from power source. Perhaps faulty cable/connector.
 Err 55: Welding forbidden (configuration / system bus reserved)
 Err 61: The water unit is not found. Cooling unit may be OFF.
 Err 153: Overheating of liquid-cooled gun
 Err 154: Wire feed motor overcurrent. Perhaps the wire liner is blocked or gun cable too curvy.
 Err 155: Wire feed motor overload. Motor´s current is too close to the limit.
 Err 161: Warning of the wire feed unit overheating
 Err 162: Overloading of the wire feed motor
 Err 171: Configuration of the equipment can not be found. Gun start wires cross-connected.
 Err 172: Wrong configuration code has been supplied
 Err 173: Operation is not activated with right configuration code
 Err 184: Control cable not connected or faulty.
 Err 185: Machine program update error. Wrong program or updating method.
 Err 201: Usage of PMT-gun prevented
 Err 221: Data error of the panel (1)
 Err 222: Data error of the panel (2)
 Err 223: Data error of the panel (3)
 Err 224: Data error of the panel (4)
 Err 225: Program updating problem.
 Err 241: EEPROM is faulty
 Err 251: DLI data communication error(another unit in the bus is using same code=conflict)
 Err 252: DLI data error (2)
 Err 254: DLI data communication error(connection to other units has been interrupted(maybe bad connectors or cable damages)
 Err 255: DLI data communication error(program update problem, maybe a wrong program version etc)
 Err 999: Unidentified error (systembus has sent an error message not identified by the panel)

Wire feed speed calibration / KM

- In factory set Wfs is adjusted in the range of 4...100 without any unit
- LED light and feed roll symbol tells that the parameter to be set is Wfs
- After Wfs Calibration **m/min** unit is displayed

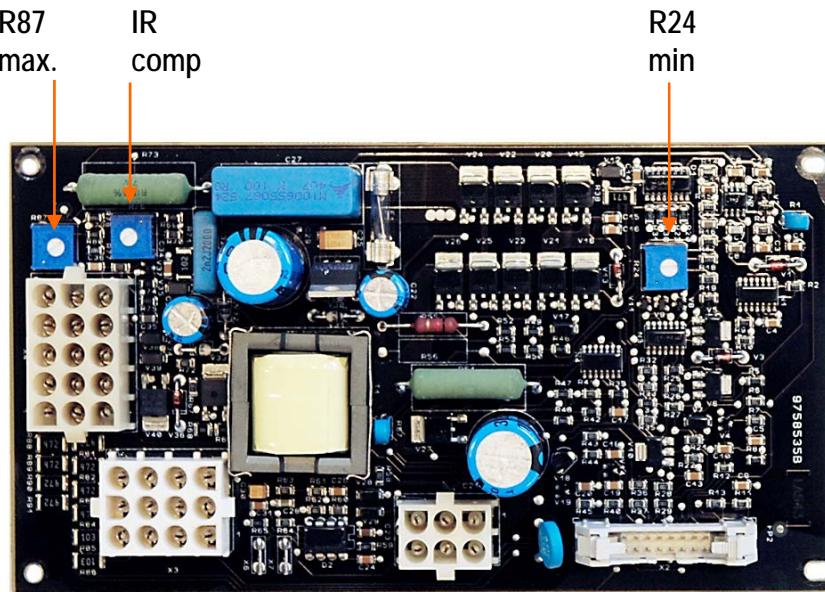

- Drive filler wire through the MIG gun and contact tip
- Enter to User Setup Menu by pressing **SETUP** button (appr 5 s)
- Select the Calibration menu (**CAL**) with left side potentiometer
- Select "Enter" (**Ent**) with right side potentiometer
- Approve your selection by pressing briefly **REMOTE / LOCAL** key
- Select '**m/min**' as calibration value of the quantity with right side potentiometer
- Approve selection by pressing briefly **REMOTE / LOCAL** key
- Set first Calibration point (e.g. 2.0 m/min) with left side potentiometer
 1. Press MIG gun trigger and let the wire run until it stops automatically
 2. Measure the length of feeded wire with the accuracy of 1 cm
 3. Enter wire length to the panel display (**cm**) with right side potentiometer
 4. Approve your selection by pressing briefly **REMOTE / LOCAL** button
- Set second Calibration point (e.g. 18.0 m/min)
- Repeat steps 1 - 4 with left side potentiometer
- Message "**Suc cES**" in the display inform that calibration has ended successfully
- After Calibration panel returns to the operation mode

Wire feed speed calibration

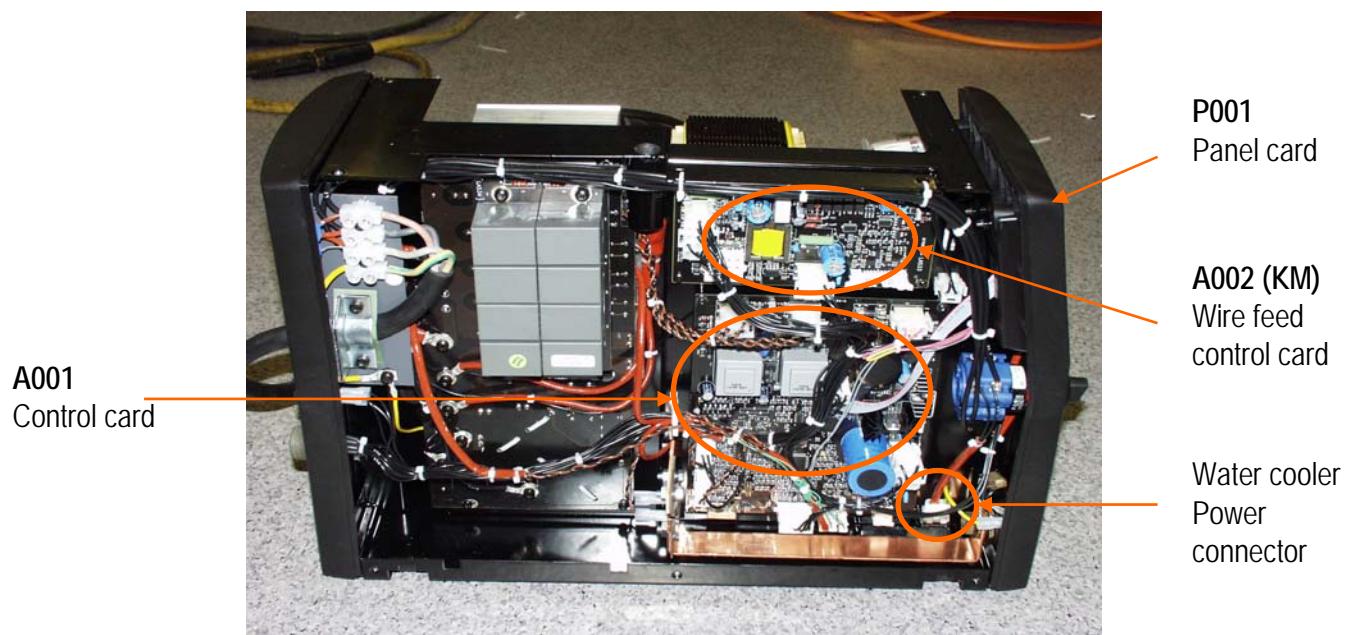

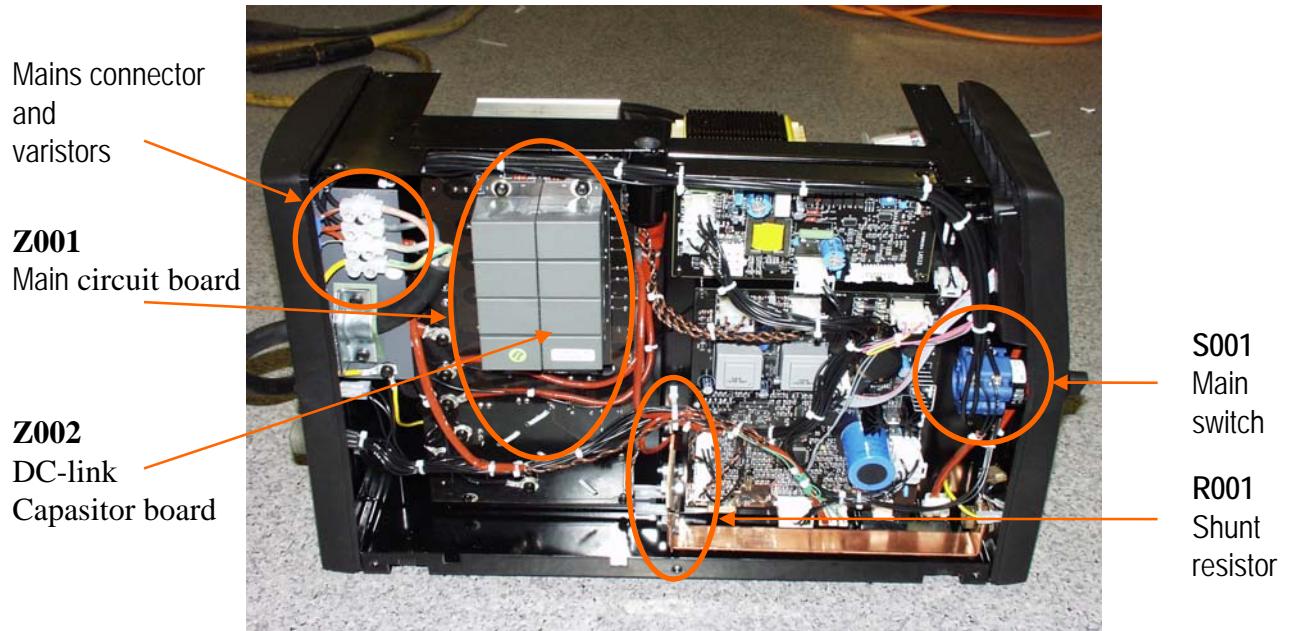

If wire feeding speed is not correct (too slow or too fast), motor control card A002 must be calibrated by following instruction:

- Set 'MIN' and 'MAX' -trimmers to middle position.
- Set 'IR-comp' -trimmer to clock vice maximum.
- Set wire feeding speed to maximum from the panel (Basic: 100, Synergic: 25,0 m/min). Adjust 'MAX' -trimmer until wire feeding speed is same than value adjusted from the panel.
- Set wire feeding speed to minimum from the panel (Basic: 4, Synergic: 1,0 m/min). Adjust 'MIN' -trimmer until wire feeding speed is same than value adjusted from the panel.
- Check/adjust minimum and maximum again until both are OK.
- If adjustment range is too small, decrease IR -compensation and adjust minimum and maximum again.

IGBT testing

IGBT replacing

Mounting the IGBT to the heat sink

The tools and premises used in this work must be clean and free of dirt and dust. Even very small particles (0,050mm) between the surfaces may increase the gap between heatsink and module, causing overheating and possible damage.

Heat transfer compound is to be spread in even layer of approximately 0,1 mm onto the module base. Then the module should be immediately mounted on the heatsink, in order to minimize the possibility of dirt getting between the components.

First, all the M5 type screws are tightened 0,5...2 NM. After a few minutes the module can be tightened into the torque of 3 NM.
